

X-GRIP

HARD ENDURO

RACEREADY

- X RaceReady from the Start – adaptable when needed**
No drilling, no cutting, no setup required. Pre-marked drilling points on SOFT and MEDIUM versions allow quick adaptation when conditions change.
- X Developed for real Hard Enduro**
Built & tested under modern Hard & Extreme Enduro race conditions. Hard Enduro World Championship proven.
- X Maximum traction in technical terrain**
The optimized RaceReady contour creates a larger contact patch for improved grip on rocks, roots, loose ground, and wet terrain.
- X More stability at high speed**
The wider outer contour improves side stability, reduces tyre movement, and delivers smoother straight-line stability in rough terrain.
- X BEADFIT Technology – helps tyre support**
Supports a more stable tyre fitment in the rim bead and helps reduce unwanted tyre slip-in under extreme loads.
- X Engineered for performance**
Holes are molded directly into the mousse instead of drilled afterwards, creating a cleaner structure and improved performance.
- X 3 Variants. 1 System.**
All variants use the same proven base shape and compound. Performance characteristics are tuned only through the hole configuration.

BEADFIT TECHNOLOGY

Supports a stable tyre fitment in the rim bead.

EXTREME

30 molded pressure reduction holes

SOFT

15 molded pressure reduction holes + pre-marked drilling points

MEDIUM

Pre-marked drilling points

PATENT PENDING
